meetzealishan@gmail.com | 470-807-6265 | www.linkedin.com/in/zeeshan-ali-929101261 | Alpharetta, GA | za17384.github.io

## EDUCATION

University of Georgia, College of Engineering – Athens, GA May 2029  
Bachelor of Science in Computer Engineering GPA: 3.8  
Relevant Coursework: Discrete Math, Object-Oriented Programming, Data Structures, Data Science & ML, Systems Programming

## PROFESSIONAL EXPERIENCE

MerchantE – AI & Automation Intern – Buckhead, GA Sep 2026 – Present  
• Exploring and building an AI-powered Merchant Agent that can help merchants and partners navigate the portal, potentially automate common workflow. Integrating Agent Studio with confluence and SharePoint.

ContinuServe – AI Solutions Developer Intern (Core Developer / Architect Track) – Marietta, GA May 2026 – Aug 2026  
• Developed and maintained a **multi-agent AI workflow platform** using Python and FastAPI to supporting agentic routing, prompt engineering modules, and reusable backend logic for financial statements, trend analysis, KPI visualizations and ratios.  
• Built and tested 16+ **REST API** endpoints and a **React 18** + TypeScript frontend with real-time **Server-Sent Events (SSE) streaming**, workflow controls, and automated Excel/PDF/PPT export features to Amazon S3 for end users and stakeholders.  
• Collaborated with senior developers through sprint planning, code reviews, troubleshooting, and documentation while implementing a **RAG** memory layer, confidence-scoring engine, and **pytest** suite covering API, SQL, and LLM validation.  
• Engineered a RAG-based memory layer using AstraDB and Redis for confidence-scoring engine, and developed pytest coverage for API behavior, SQL operations, and LLM outputs to improve system reliability and response quality of the financial reports

Make It Loud Web – IT & Automation Intern – Buford, GA July 2025 – August 2025  
• Launched an automated SEO analytics product to support data-driven growth decisions across 200+ client accounts; tracked **sprint cycles** and progress using **project management** tools to coordinate deliverables across a **cross-functional** team.  
• Engineered real-time execution APIs and a responsive web UI with live logs, progress bars, timers, and pause/resume controls; produced clear **documentation** and workflow guides to enable team-wide adoption, reducing manual intervention by 70%.  
• Integrated **AI-assisted** ranking classification for keyword research and validation using **Python scripting** to **automate internal workflows** and improve page-1/page-2 accuracy across client campaigns.  
• Provided IT systems support for 200+ small-business clients across Microsoft 365, WordPress, and internal automation tools, resolving issues efficiently and communicating solutions clearly to **non-technical stakeholders**.

VDart Inc. – AI Analyst Intern – Alpharetta, GA August 2024 – May 2025  
• Led a **cross-functional** AI intern team to build an enterprise **RAG**-powered chatbot for 4,000+ employees using Pinecone vector search and **LLM orchestration**, enabling natural-language queries over company data and improving internal knowledge discovery.  
• Completed AWS Cloud certification covering core IT resources and cloud storage types; championed **AI literacy** across teams by researching and communicating **LLM** capabilities and best practices to both technical and **non-technical stakeholders**.  
• Managed IT resources for clients valued at over \$1,000,000, maintaining websites and deployments, supporting SEO platforms, and troubleshooting production issues to improve uptime, performance, and delivery speed across teams.

## PROJECT EXPERIENCE

AI Electronic Waste Sorter IEEE First-Year Council Project – Athens, GA September 2025 – May 2026  
• Built an AI-powered embedded computer-vision system on Raspberry Pi 5 using Python, PyTorch, and YOLOv8, detecting and classifying 5 e-waste components from live camera feeds with real-time inference accuracy above 90 percent.  
• Integrated OpenCV for live camera feed processing, enabling real-time detection of electronic components; maintained thorough **documentation** of model architecture, data pipeline, and system design throughout the project lifecycle.  
• Trained a custom model across three iterative data cycles, to 1,026 annotated images using Label Studio pipeline.  
• Created a concise system architecture mapping how the trained AI model interfaces with Pi camera + motor/servo controllers.

## TECHNICAL PROFICIENCIES

**Languages & Frameworks:** Python, Java, C++ , JavaScript/TypeScript, React, Node.js, Django, FastAPI, REST APIs  
**Databases & AI:** SQL, SQL Server, SQLAlchemy, pyodbc, PyTorch, YOLOv8, OpenCV, **LLM** APIs, **RAG**, Prompt Engineering, Vector Database, Azure DevOps, Google Cloud Platform, OpenClaw, Groq, Cursor, Model Context Prompt (MCP), TensorFlow **Tools &**  
**Platforms:** AWS Certified Cloud Practitioner (click to view), Git, GitHub, Postman, CI/CD, **Agile/Scrum**, Jira, Confluence, GitHub Copilot, AWS S3, Anaconda, SMTP, Microservice Architecture, Selenium, ChromeDriver, UI/UX, Unix, Pandas, Matlab, NumPy, Flask
